BNB
Chain

BEQ
Ranking

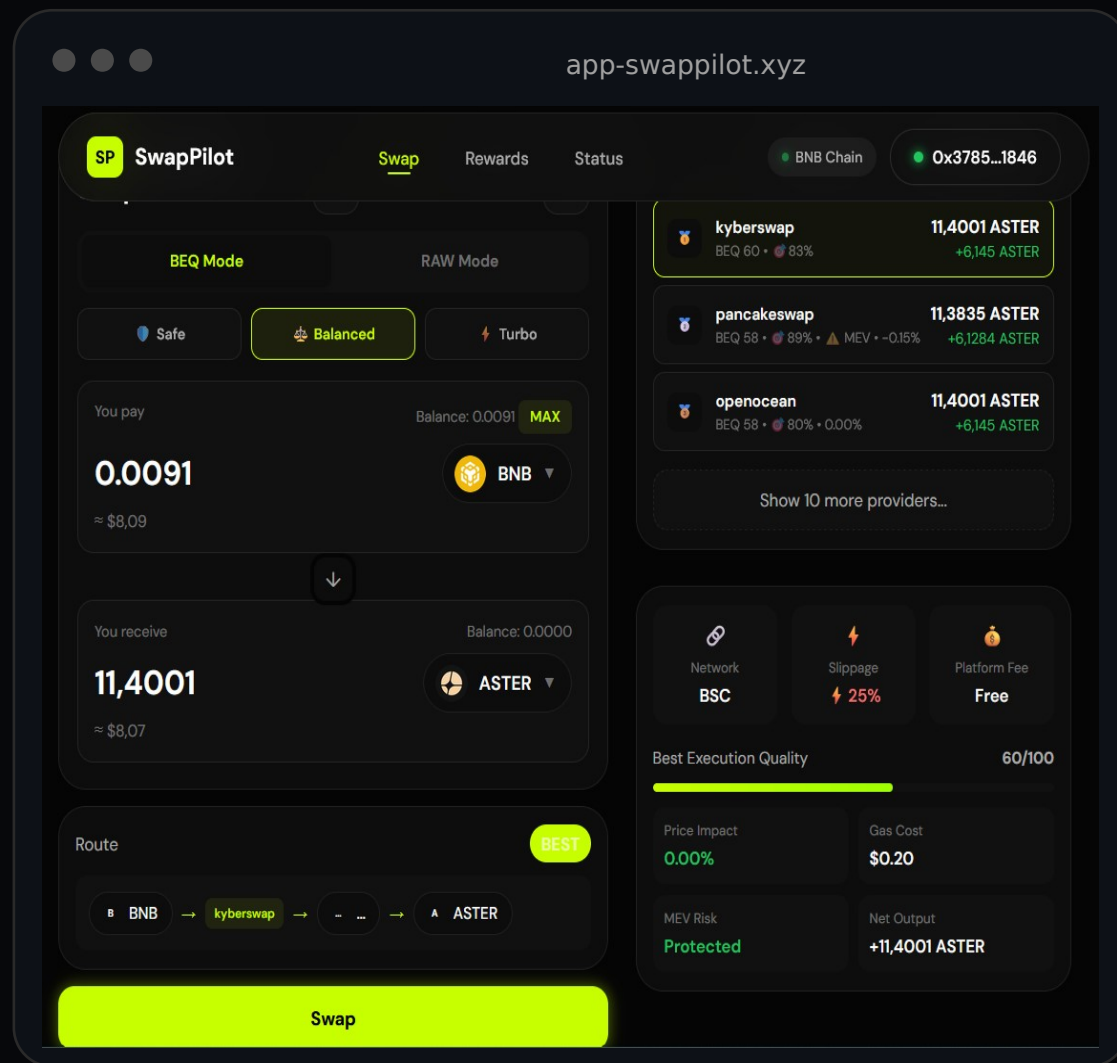

Non-
custodial

Safer swaps on BNB Chain.

SwapPilot is a DEX aggregator that ranks quotes into BEQ (Best Executable Quote) and optimizes for execution safety before you sign.

[Read docs →](#)

PROBLEM

Swaps still feel unpredictable.

Users can't reliably estimate what they will actually receive — especially on fee-on-transfer tokens and fast-moving routes.

Fragmented liquidity

Prices differ per DEX. Manual comparison is slow and error-prone. Users waste time checking multiple platforms.

Hidden costs

Slippage + token transfer taxes reduce net output after execution. What you see is not what you get.

Execution risk

Routes can fail; users need preflight signals and clear warnings before signing transactions.

One flow that optimizes & explains.

SwapPilot separates "best raw output" from "best executable" and documents every decision transparently.

BEQ (Best Executable Quote)

Optimizes for executability first — then for output. Not just the highest number, but the safest path.

Decision transparency

Every quote returns detailed reasoning: whyWinner · warnings · ranking rationale · assumptions.

Risk modes

SAFE / NORMAL / DEGEN switch the BEQ weights — reasoning stays fully transparent.

PRODUCT

How a swap happens

Four steps — mapped to real API endpoints.

1. Quote

POST /v1/quotes
Fan-out to multiple providers in parallel on BSC (chainId 56).

2. Rank

Return rankedQuotes (BEQ) + bestRawQuotes + recommended provider.

3. Explain

GET /v1/receipts/:id
whyWinner + warnings + assumptions in one artifact.

4. Execute

Use /v1/build-tx for ready-to-sign tx or open provider via deepLink.

COVERAGE

Providers on BNB Chain

Top aggregators and DEX routers. BEQ prioritizes executability over the best-looking number.

10+ Providers

PancakeSwap · 1inch ·
OKX DEX · KyberSwap ·
ParaSwap · Odos ·
OpenOcean · 0x ·
Uniswap V2 · Uniswap V3

Capabilities

Quotes + ranking ·
buildTx where supported ·
deep-links as fallback ·
health endpoint
/v1/providers/status

Risk signals

Sellability · revert risk ·
MEV exposure · churn ·
optional token security
(GoPlus / HoneyPot.is)

Non-custodial

Users sign in their wallet.
SwapPilot does not hold
keys or funds. Your keys,
your crypto.

PROOF

A working system.

Public app + public API. Every quote run returns detailed decision data for full auditability.

Decision data includes

rankedQuotes · beqRecommendedProviderId · whyWinner
· warnings · ranking.mode · preflight signals

QUOTES

/v1/quotes

BUILD TX

/v1/build-tx

BUSINESS MODEL

Revenue aligned with usage.

Simple monetization primitives already built into the stack. No projections — just shipped code.

💰 Fee engine (API)

Endpoints `/v1/fees/calculate` and `/v1/pilot/tier` compute fees and holding-based discounts dynamically.

🔥 Fee distribution (Contracts)

FeeCollector contract: 15% buy & burn · 85% treasury distribution. Deployed on BSC.

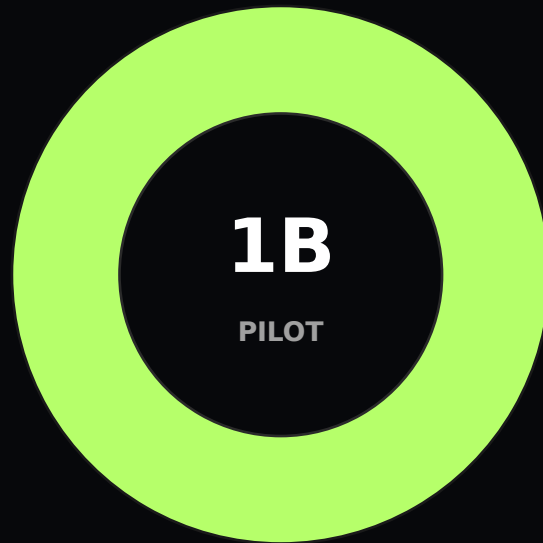

🤝 Referral incentives (Contracts)

ReferralPool + ReferralRewards contracts support referral-based reward flows for growth.

DISTRIBUTION

Token allocation

Fixed supply · No inflation · No mint function

	Public Sale	35%
	Treasury	20%
	CEX & Marketing	12%
	Liquidity	12%
	Team	11%
	Advisors	5%
	Referral	5%

TOKENOMICS

Key metrics
