- BEQ Ranking
- Non-custodial

# Safer swaps on BNB Chain.

SwapPilot is a DEX aggregator that ranks quotes into BEQ (Best Executable Quote) and optimizes for execution safety before you sign.

[Open app →](#)[Read docs →](#)

**PROBLEM**

# Swaps still feel unpredictable.

Users can't reliably estimate what they will actually receive — especially on fee-on-transfer tokens and fast-moving routes.

## ✖ Fragmented liquidity

Prices differ per DEX. Manual comparison is slow and error-prone.  
Users waste time checking multiple platforms.

## 💸 Hidden costs

Slippage + token transfer taxes reduce net output after execution.  
What you see is not what you get.

## ⚠ Execution risk

Routes can fail; users need preflight signals and clear warnings before signing transactions.

**SOLUTION**

# One flow that optimizes & explains.

SwapPilot separates "best raw output" from "best executable" and documents every decision transparently.

## BEQ (Best Executable Quote)

Optimizes for executability first — then for output. Not just the highest number, but the safest path.

## Decision transparency

Every quote returns detailed reasoning: whyWinner · warnings · ranking rationale · assumptions.

## Risk modes

SAFE / NORMAL / DEGEN switch the BEQ weights — reasoning stays fully transparent.

**PRODUCT**

# How a swap happens

Four steps — mapped to real API endpoints.

**1. Quote**

POST /v1/quotes  
Fan-out to multiple providers in parallel on BSC (chainId 56).

**2. Rank**

Return rankedQuotes (BEQ) + bestRawQuotes + recommended provider.

**3. Explain**

GET /v1/receipts/:id  
whyWinner + warnings + assumptions in one artifact.

**4. Execute**

Use /v1/build-tx for ready-to-sign tx or open provider via deepLink.

---

**COVERAGE**

# BNB Chain Coverage

Top aggregators and DEX routers. BEQ prioritizes executability over the best-looking number.

## 10+ Providers

PancakeSwap · 1inch · OKX  
DEX · KyberSwap ·  
ParaSwap · Odos ·  
OpenOcean · 0x · Uniswap  
V2 · Uniswap V3

## Capabilities

Quotes + ranking · buildTx  
where supported · deep-  
links as fallback · health  
endpoint  
</v1/providers/status>

## Risk signals

Sellability · revert risk · MEV  
exposure · churn · optional  
token security (GoPlus /  
Honeypot.is)

## Non-custodial

Users sign in their wallet.  
SwapPilot does not hold  
keys or funds. Your keys,  
your crypto.

**PROOF**

# A working system.

Public app + public API. Every quote run returns detailed decision data for full

**Decision data includes**

rankedQuotes · beqRecommendedProviderId · whyWinner ·  
warnings · ranking.mode · preflight signals

---

**BUSINESS MODEL**

# Revenue aligned with usage.

Simple monetization primitives already built into the stack. No projections — just shipped code.

## \$ Fee engine (API)

Endpoints /v1/fees/calculate and /v1/pilot/tier compute fees and holding-based discounts dynamically.

## 🔥 Fee distribution (Contracts)

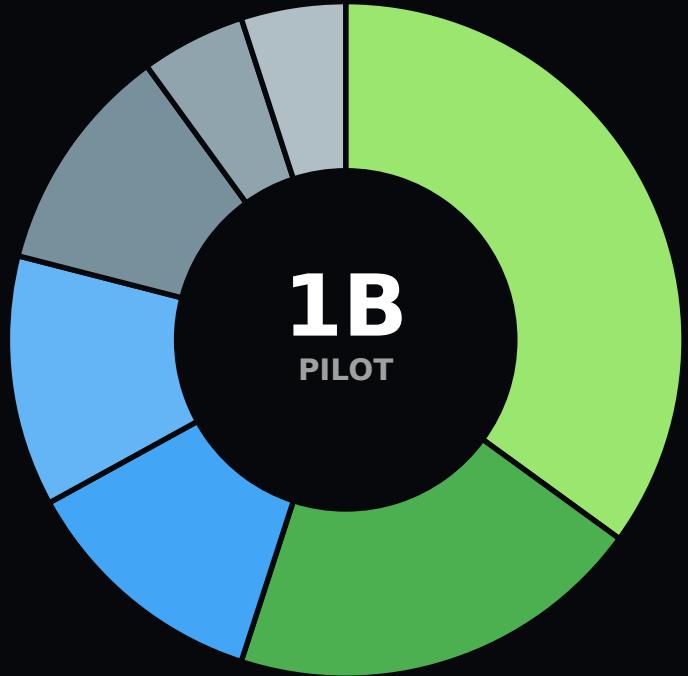

FeeCollector contract: 15% buy & burn · 85% treasury distribution.  
Deployed on BSC.

## 🤝 Referral incentives (Contracts)

ReferralPool + ReferralRewards contracts support referral-based reward flows for growth.

**DISTRIBUTION**

# Token Allocation

Fixed supply · No inflation · No mint function

Public Sale	35%
Treasury	20%
CEX & Marketing	12%
Liquidity	12%
Team	11%
Advisors	5%
Referral	5%
