

# Safer swaps on BNB Chain.

SwapPilot is a DEX aggregator that ranks quotes into BEQ (Best Executable Quote) and optimizes for execution safety before you sign.

[Open app →](#)[Read docs →](#)

**PROBLEM**

# Swaps still feel unpredictable.

Users can't reliably estimate what they will actually receive — especially on fee-on-transfer tokens and fast-moving routes.

## Fragmented liquidity

Prices differ per DEX. Manual comparison is slow and error-prone. Users waste time checking multiple platforms.

## Hidden costs

Slippage + token transfer taxes reduce net output after execution. What you see is not what you get.

## Execution risk

Routes can fail; users need preflight signals and clear warnings before signing transactions.

# One flow that optimizes & explains.

SwapPilot separates "best raw output" from "best executable" and documents every decision transparently.

## BEQ (Best Executable Quote)

Optimizes for executability first — then for output. Not just the highest number, but the safest path.

## Decision transparency

Every quote returns detailed reasoning: whyWinner · warnings · ranking rationale · assumptions.

## Risk modes

SAFE / NORMAL / DEGEN switch the BEQ weights — reasoning stays fully transparent.

**PRODUCT**

# How a swap happens

Four steps — mapped to real API endpoints.

**1. Quote**

POST /v1/quotes  
Fan-out to multiple providers in parallel on BSC (chainId 56).

**2. Rank**

Return rankedQuotes (BEQ) + bestRawQuotes + recommended provider.

**3. Explain**

GET /v1/receipts/:id  
whyWinner + warnings + assumptions in one artifact.

**4. Execute**

Use /v1/build-tx for ready-to-sign tx or open provider via deepLink.

---

**COVERAGE**

# Providers on BNB Chain

Top aggregators and DEX routers. BEQ prioritizes executability over the best-looking number.

## **10+ Providers**

PancakeSwap · 1inch ·  
OKX DEX · KyberSwap ·  
ParaSwap · Odos ·  
OpenOcean · 0x ·  
Uniswap V2 · Uniswap V3

## **Capabilities**

Quotes + ranking ·  
buildTx where supported ·  
deep-links as fallback ·  
health endpoint  
</v1/providers/status>

## **Risk signals**

Sellability · revert risk ·  
MEV exposure · churn ·  
optional token security  
(GoPlus / Honeypot.is)

## **Non-custodial**

Users sign in their wallet.  
SwapPilot does not hold  
keys or funds. Your keys,  
your crypto.

**PROOF**

# A working system.

Public app + public API. Every quote run returns detailed decision data for full auditability.

**Decision data includes**

rankedQuotes · beqRecommendedProviderId · whyWinner · warnings · ranking.mode · preflight signals

**app**  
**swappilot.xy**  
**z**

**PUBLIC API**  
**swappilot-api.fly.dev**

**SWAGGER UI**

**QUOTES**  
**/v1/quotes**

**BUILD TX**  
**/v1/build-tx**

---

**BUSINESS MODEL**

# Revenue aligned with usage.

Simple monetization primitives already built into the stack. No projections — just shipped code.

## Fee engine (API)

Endpoints `/v1/fees/calculate` and `/v1/pilot/tier` compute fees and holding-based discounts dynamically.

## Fee distribution (Contracts)

FeeCollector contract: 15% buy & burn · 85% treasury distribution. Deployed on BSC.

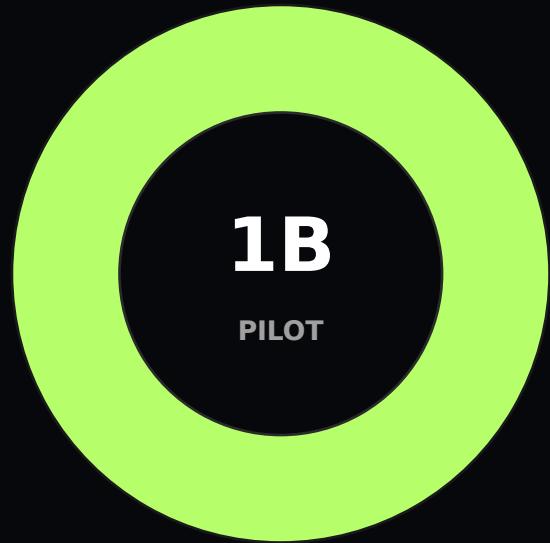

## Referral incentives (Contracts)

ReferralPool + ReferralRewards contracts support referral-based reward flows for growth.

**ROADMAP**

# Execution milestones

**PHASE 1 ✓****Foundation**

Core aggregation engine  
BSC mainnet  
1inch/Kyber/Para/OKX  
Wallet connect  
Real-time monitoring

**PHASE 2****Q1 2026**

Multi-chain expansion  
Ethereum, Arbitrum, Base  
Analytics dashboard  
Price alerts  
Limit orders

**PHASE 3****Q2 2026**

Cross-chain swaps  
DCA / recurring buys  
Portfolio tracking  
Mobile app iOS/Android

**PHASE 4****Q3-Q4 2026**

Public API & SDK  
Developer widget  
Institutional features  
DAO governance
