# SwapPilot

● BNB Chain ● BEQ Ranking ● Non-custodial

app-swappilot.xyz

Safer swaps on BNB Chain.

SwapPilot is a DEX aggregator that ranks quotes into BEQ (Best Executable Quote) and optimizes for execution safety before you sign.

[App Screenshot]

PROBLEM

Swaps still feel unpredictable.

Users can't reliably estimate what they will actually receive — especially on fee-on-transfer tokens and fast-moving routes.

🔀 **Fragmented liquidity**

Prices differ per DEX. Manual comparison is slow and error-prone. Users waste time checking multiple platforms.

💸 **Hidden costs**

Slippage + token transfer taxes reduce net output after execution. What you see is not what you get.

⚠️ **Execution risk**

Routes can fail; users need preflight signals and clear warnings before signing transactions.

SOLUTION

One flow that optimizes & explains.

SwapPilot separates "best raw output" from "best executable" and documents every decision transparently.

🏆 **BEQ (Best Executable Quote)**

Optimizes for executability first — then for output. Not just the highest number, but the safest path.

📃 **Decision transparency**

Every quote returns detailed reasoning: whyWinner · warnings · ranking rationale · assumptions.

🎚️ **Risk modes**

SAFE / NORMAL / DEGEN switch the BEQ weights — reasoning stays fully transparent.

PRODUCT

How a swap happens

Four steps — mapped to real API endpoints.

1. Quote

POST /v1/quotes
Fan-out to multiple providers in parallel on BSC (chainId 56).

2. Rank

Return rankedQuotes (BEQ) + bestRawQuotes + recommended provider.

3. Explain

GET /v1/receipts/:id whyWinner + warnings + assumptions in one artifact.

4. Execute

Use /v1/build-tx for ready-to-sign tx or open provider via deepLink.

COVERAGE

Providers on BNB Chain

Top aggregators and DEX routers. BEQ prioritizes executability over the best-looking number.

🔗 10+ Providers

PancakeSwap · 1inch · OKX DEX · KyberSwap · ParaSwap · Odos · OpenOcean · 0x · Uniswap V2 · Uniswap V3

⚙ Capabilities

Quotes + ranking · buildTx where supported · deep-links as fallback · health endpoint /v1/providers/status

🛡 Risk signals

Sellability · revert risk · MEV exposure · churn · optional token security (GoPlus / Honeypot.is)

🔐 Non-custodial

Users sign in their wallet. SwapPilot does not hold keys or funds. Your keys, your crypto.

SwapPilot

PROOF

A working system.

Public app + public API. Every quote run returns detailed decision data for full auditability.

📋 **Decision data includes**

rankedQuotes · beqRecommendedProviderId · whyWinner · warnings · ranking.mode · preflight signals

BUSINESS MODEL

Revenue aligned with usage.

Simple monetization primitives already built into the stack. No projections — just shipped code.

💰 **Fee engine (API)**

Endpoints /v1/fees/calculate and /v1/pilot/tier compute fees and holding-based discounts dynamically.

🔥 **Fee distribution (Contracts)**

FeeCollector contract: 15% buy & burn · 85% treasury distribution. Deployed on BSC.
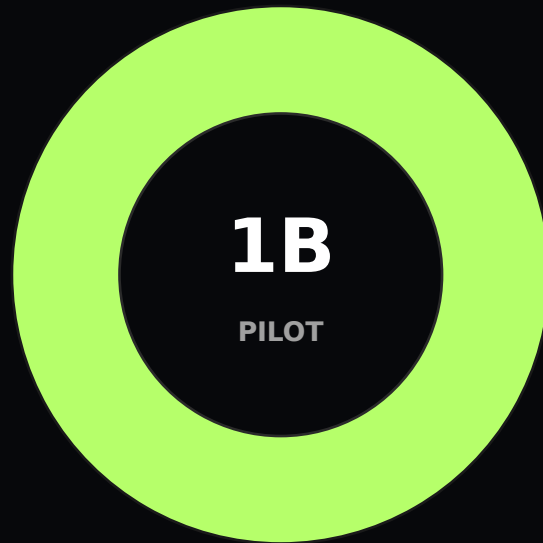

🤝 **Referral incentives (Contracts)**

ReferralPool + ReferralRewards contracts support referral-based reward flows for growth.
