**SP** SwapPilot

- BNB Chain
- BEQ Ranking
- Non-custodial

Safer swaps on BNB Chain.

SwapPilot is a DEX aggregator that ranks quotes into BEQ (Best Executable Quote) and optimizes for execution safety before you sign.

PROBLEM

Swaps still feel unpredictable.

Users can't reliably estimate what they will actually receive — especially on fee-on-transfer tokens and fast-moving routes.

🔀 **Fragmented liquidity**

Prices differ per DEX. Manual comparison is slow and error-prone. Users waste time checking multiple platforms.

💸 **Hidden costs**

Slippage + token transfer taxes reduce net output after execution. What you see is not what you get.

⚠️ **Execution risk**

Routes can fail; users need preflight signals and clear warnings before signing transactions.

SOLUTION

One flow that optimizes & explains.

SwapPilot separates "best raw output" from "best executable" and documents every decision transparently.

🏆 BEQ (Best Executable Quote)

Optimizes for executability first — then for output. Not just the highest number, but the safest path.

🧾 Decision transparency

Every quote returns detailed reasoning: whyWinner · warnings · ranking rationale · assumptions.

🎚️ Risk modes

SAFE / NORMAL / DEGEN switch the BEQ weights — reasoning stays fully transparent.

PRODUCT

How a swap happens

Four steps — mapped to real API endpoints.

1. Quote

POST /v1/quotes
Fan-out to multiple providers in parallel on BSC (chainId 56).

2. Rank

Return rankedQuotes (BEQ) + bestRawQuotes + recommended provider.

3. Explain

GET /v1/receipts/:id whyWinner + warnings + assumptions in one artifact.

4. Execute

Use /v1/build-tx for ready-to-sign tx or open provider via deepLink.

COVERAGE

Providers on BNB Chain

Top aggregators and DEX routers. BEQ prioritizes executability over the best-looking number.

🔗 10+ Providers

PancakeSwap · 1inch · OKX DEX · KyberSwap · ParaSwap · Odos · OpenOcean · 0x · Uniswap V2 · Uniswap V3

⚙ Capabilities

Quotes + ranking · buildTx where supported · deep-links as fallback · health endpoint /v1/providers/status

🛡 Risk signals

Sellability · revert risk · MEV exposure · churn · optional token security (GoPlus / Honeypot.is)

🔐 Non-custodial

Users sign in their wallet. SwapPilot does not hold keys or funds. Your keys, your crypto.

PROOF

A working system.

Public app + public API. Every quote run returns detailed decision data for full auditability.

📋 **Decision data includes**

rankedQuotes · beqRecommendedProviderId · whyWinner · warnings · ranking.mode · preflight signals

BUSINESS MODEL

Revenue aligned with usage.

Simple monetization primitives already built into the stack. No projections — just shipped code.

💰 **Fee engine (API)**

Endpoints /v1/fees/calculate and /v1/pilot/tier compute fees and holding-based discounts dynamically.
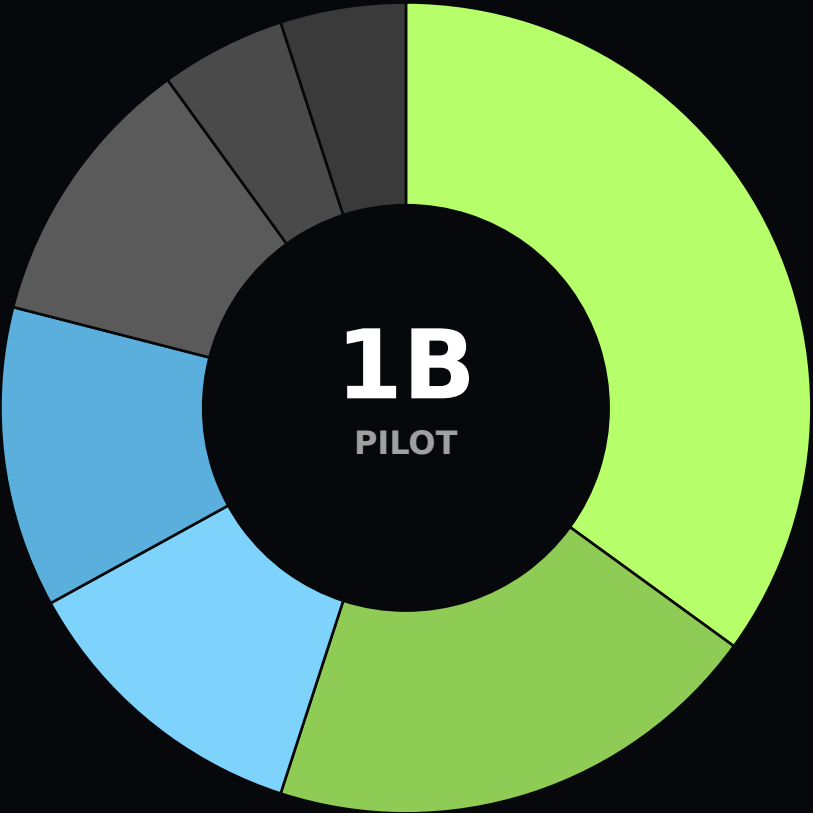

🔥 **Fee distribution (Contracts)**

FeeCollector contract: 15% buy & burn · 85% treasury distribution. Deployed on BSC.

🤝 **Referral incentives (Contracts)**

ReferralPool + ReferralRewards contracts support referral-based reward flows for growth.
